CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Disclosed are **ionene polymers** having antimicrobial activity. "**Ionene polymers**" as used in this invention are cationic **polymers** in which a substantial proportion of the atoms providing the positive charge are quaternized nitrogens located in the main polymeric chain or backbone of the **polymer** rather than in pendant groups. Also disclosed are antimicrobial compositions comprising **ionene polymers** and methods for treating microbial infections in mammals comprising the step of administering to a mammal, a therapeutically effective amount of at least one antimicrobial composition of the invention. Also disclosed are antimicrobial compositions comprising at least one **ionene polymer** and methods for preventing, inhibiting or eliminating the growth, dissemination, and/or the accumulation of microorganisms on a susceptible surface (including, but not limited to, the formation of biofilms on a susceptible surface) comprising the step of contacting such surface with a composition of the invention.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

mucositis and oral **mucositis** in mammals is provided. The method comprises administering to a mammal an effective amount of an **ionene polymer** to prophylactically or therapeutically treat **mucositis**. An example **polymer** prepared was poly(hexamethylenebiscyanoguanidine-alt-4,9-dioxadodecane). Also an example showed that polyionenes are effective in treating **mucositis** in a hamster model following irradiation therapy.
